ABSTRACT

The Faculty of Computer and Mathematical Sciences is one of the faculties operating in UiTM Campus Jasin, Malacca. Every semester, faculty management faces multiple challenges. One of the issues is the difficulties in arranging and managing classes for students for each semester and issue to estimate the number of class groups in the future. To solve the issue the Student-Class Optimization System had been developed by using optimization technique, specifically, is a Greedy Algorithm. This system optimizes and suggests on an ideal number of student groups should be taken in the next semester. The methodology used to develop this system is a Waterfall Model. The system had been successfully developed following all of 5 phases in the model which are requirement analysis, design, implementation, testing and maintenance. During the testing stage, two testing had been conducted, first was functionality testing and second was usability testing. For the functional testing, the system passes all of the testing and for the usability testing, the average mean is 70% shows that this system is good, relevant and do relate to the study. However, there will be a lot of improvement could be done in the future. Overall, the result of the application of the web-based showed that this application can be considered as successful and very helpful for the user.

ABSTRACT	v
TABLE OF CONTENTS	vi
LIST OF FIGURES	ix
LIST OF TABLES	xi
LIST OF ABBREVIATIONS	xii
 CHAPTER ONE: INTRODUCTION	
1.1 Background of Study	1
1.2 Problem Statement	3
1.3 Research Objective	5
1.4 Research Scope	5
1.5 Research Significance	5
 CHAPTER TWO: LITERATURE REVIEW	
2.1 High Learning Institution	6
2.1.1 UiTM Melaka Branch, Jasin Campus	7
2.1.2 Faculty Management (FSKM)	7
2.2 Scheduling Technique	8
2.3 Optimization	9
2.3.1 Optimization Process	10
2.4 Optimization Method	11
2.4.1 Genetic Algorithm	11
